

LED Drivers - Precautions for Product Installation and Operation

1. Hytronik LED drivers are designed to suit protection class II luminaires. Please kindly note that in a case whereby such LED drivers are used in protection class I luminaires, it may cause residual LED glow during standby operation. If the driver has to be used in such class I luminaires, please kindly inform Hytronik in advance, so that we can make some minor adjustments to eliminate the residual glow.
2. Regarding the maximum quantity of drivers per each type of circuit breaker, please kindly note that actual quantity may vary due to different types of circuit breaker used and installation environment. The calculation shown on data sheet is based on ABB circuit breaker series S200.
